

SDV body-armour apron for humanitarian demining

The SDV body-armour (NATO STANAG 2920 V50 – 450m/s) is versatile enough for deminers and supervisors, providing vital area protection whether walking around or excavating anti-personnel mines. The design is simple and effective. The SDV body-armour can be worn short or long, depending on your activity at the time. Adjustment is as simple as unfastening a Velcro tab.

With a multi-layer polyamide inner covered by a removable Cordura® textured nylon outer that is washable and exceptionally long-lasting and resistant to tears and scuffs, the SDV weighs 2.5kg complete with a polycarbonate chest insert that brings vital area protection above the IMAS requirement of STANAG 2920 450 m/s.

The ventilated high-performance Nylon-6.6 back does not provide protection, but does ensure that the weight rests on the shoulders and so increases comfort.

A large collar interfaces with the SD visor range, so providing assured frontal protection in line with IMAS 10.30.

Colours may vary between dye lots.

SD Part no.: SKU2014

NOTE: Like most other PPE, SD armour is designed to be water-resistant. Users should avoid getting the core of any armour wet because this can reduce the protection it offers. If the core of armour gets wet, allow the garment to dry naturally before use. Do not tumble-dry or expose to heaters.
